Note 1: This model is reinforced, and the difference between GA2 and GB2 is that it has the ability of 9t at the center of 900 load. See the load curve for details.

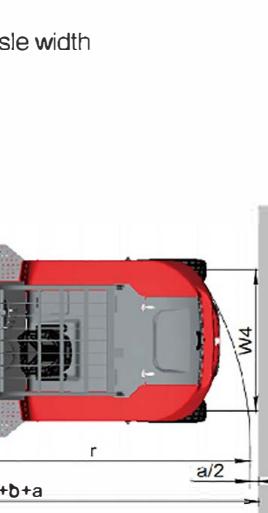

- The compact body design and smaller wheelbase allow the vehicle to springle freely in a narrow space while maintaining the power and speed capable of achieving high productivity.
- Truck body length(without forks) 3760mm(CPD100)
4210mm(CPCD100) (Others)
- Runing radius 3320mm(CPD100)
3900mm(CPCD100) (Others)

Note: The vertical axis stands for load capacity and the horizontal axis stands for load center which is calculated from the front surface of the forks to the gravity of the standard load. the standard load means a cubic with 1200mm edge length. When mast is tilted forward, using non-standard forks or loading large goods, the load capacity will be reduced. The load capacity of standard mast at different load center can be known from this load chart.
